

ABSTRACT OF THE DISCLOSURE

A main body includes a plurality of holes formed therein a main clip and includes an exterior contact portion positioned exterior to the main body, a first carrier strip connected to the exterior contact portion and located within the main body and a plurality of clips extending from this carrier strip, each position within a corresponding hole formed in the main body. A slave clip includes a carrier strip located within the main body and a plurality of clips extending from the carrier strip, each positioned within a corresponding hole of the main body to make the corresponding one of the clips of the main clip. The pair of the clips formed within each hole form a terminal to allow terminal portions of a grounding wire to be connected therein. A cap having a plurality of holes corresponding in position and size to the holes formed in the main body may be frictionally engaged in a hollow portion of the main body to complete the assembly. The same potential block (e.g., grounding block) thus formed may be easily assembled utilizing only a few parts. Further, these parts may also be easily manufactured.
